

BROAD SECURE

App

Security Applications

These services include vulnerability scans, robust endpoint security for centralized management and access throughout the enterprise. Companies will achieve full visibility of the security posture for their network and each endpoint whilst increasing optimisation of existing WAN's.

Features

- Web based security scans
- MEP does not require capital outlay
- Proactive notifications, monitoring and performance reporting
- Customer administration dramatically reduced
- Prevent bandwidth wastage
- Facilitate faster disaster recovery

Benefits

- Reduce network congestion
- Optimise bandwidth utilisation between sites
- Accurate view of the security posture within IT environments
- Access to updated threat information
- IT Security piece of mind
- 24/7 Monitoring

Broadlinks range of app services include

Managed WAN Optimisation Services (WOS)

WOS is an application optimisation product. This solution combined with managed WAN services provides comprehensive network monitoring and management functions for wide area networks and application acceleration/optimisation environments.

Broadlink's offering is grounded with industry-leading CPE vendors that specialise in application acceleration and optimisation services.

Vulnerability Scanning

BroadScan is an advanced web-based vulnerability and security scanning service. It is fully-hosted and managed at a secure data centre.

Companies can request a once-off vulnerability assessment or subscribe to the ongoing security scanning service.

These audits are performed by IT security experts and are followed up with a presentation that includes a comprehensive report on the findings and recommendations.

Managed Endpoint Protection (MEP)

Managed Endpoint Protection is fully managed and hosted at a highly secure data centre. It combines best-of-breed endpoint protection technologies with around-the-clock monitoring and extensive expertise in one comprehensive managed service.

MEP integrates essential security technologies in one convenient system whilst securing both physical and virtual environments.

A companies' management servers are subscribed to in order to ensure that assets are protected against the latest threats even when roaming. Security events affecting protected endpoints are quickly identified, analysed and escalated for remediation.

Product Availability

BroadSecure is available through Broadlink as well as Broadlink-authorized channel partners.
