Product Overview

Today few businesses can survive without access to the Internet and the communications platforms that it provides. Broadlink provides a range of dedicated (1:1) Internet Access solutions designed to offer your business reliable, high-speed connectivity.

Broadlink's Internet Access services use a combination of international and local carrier networks as well as leverages global telecommunications infrastructure, including undersea cabling and satellite communication systems, allowing you to benefit from leading edge technology, multiple redundant routes and maximum reliability. These services are available over multiple last-mile access mediums and offer a business-grade service catering for a range of applications and uses.

Dedicated Internet Access services are delivered over Broadlink's network which allows for a single point of contact – making client interaction a lot simpler, as 3rd parties are not required.
