

World-class fibre connectivity, with the highest standards of service quality, reliability and stability.

Features

- Cost-effective, superior, symmetrical bandwidth for high-speed Internet access
- Business SLA
- Layer 2 and Layer 3 options available

Benefits

- Future proof technology - Once rolled out it is there to stay
- Higher bandwidth speeds
- Robust solution with reliable backhaul solutions
- Flexible and scalable
- Fixed monthly costs ensure predictable billing
- Lower Latency

Product Overview

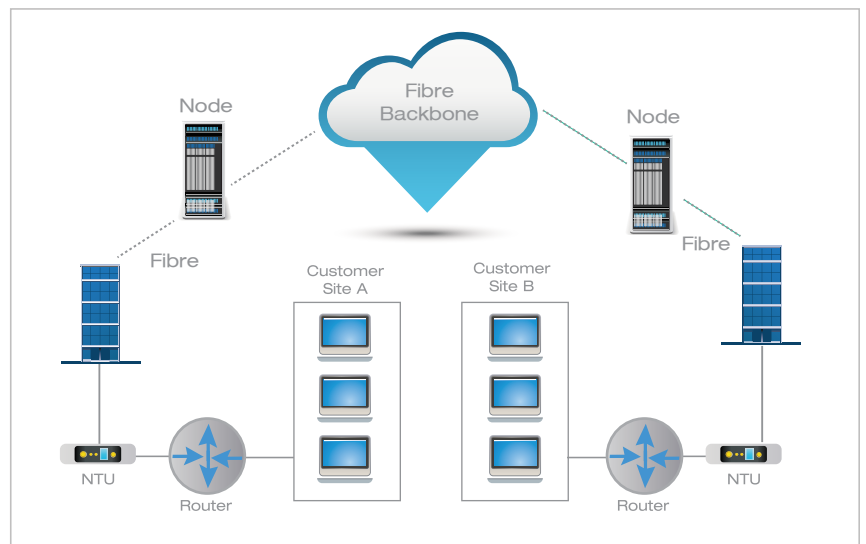

Fibre-based internet access is fast becoming the technology of choice for users who need large quantities of bandwidth, but at an affordable price. Broadlink's fibre solutions are ideal for businesses looking for a high-reliability, high speed access medium with the capacity for large volumes of data transmission combined with very low latency.

Utilising carrier-grade optical fibre infrastructure in the main metropolitan areas, Broadlink's fibre allows access to a full range of IP-based solutions allowing you to bundle internet access, voice as well as MPLS services, to provide an end-to-end solution from a single provider. Broadlink Fibre can be used as a standalone last-mile access medium, as a backhaul solution or used to complement alternate network mediums, such as wireless metro ethernet solutions.

Fibre has a much higher bandwidth capacity than copper or wireless systems; it also has no scrap value, making it less likely to be stolen. Fibre optic systems will become the leading Wide Area Network technology medium, as businesses start seeing the benefits of connectivity that literally travels at the speed of light.
