

MetroNet is a dedicated, high-speed connectivity solution for businesses requiring flexible, high capacity access.

Features

- Last mile alternative to fixed line
- Transparent Layer 2 service
- Utilises licensed, wireless spectrum
- End-to-end network management
- Available in major metropolitan areas
- Dedicated (1:1) service with no contention and low latency
- SLA guaranteed uptime of 99.5%
- Can be complemented with bandwidth and voice services

Benefits

- Highly reliable connectivity solution with carrier-grade performance
- Flexible: Increase capacity as required
- No fixed lines required
- Caters for multiple applications on a single medium
- Ideal access medium for real time applications and cloud based services

Product Availability

MetroNet is available through Broadlink as well as Broadlink-authorized channel partners. The MetroNet product is available nationally and is subject to a physical site survey.

Product Overview

MetroNet utilises licensed wireless spectrum, together with an optical fibre backbone to provide a connectivity solution with high capacity, high availability and guaranteed speeds.

This solution can be implemented to meet the primary connectivity requirements of a business, allowing transmission of IP-based data, voice and video services. MetroNet can also be used as a redundancy option, ensuring your business remains up and running even if your primary access medium goes down. In addition, this access medium can also complement other connectivity solutions that may already be in place. MetroNet is perfectly suited to the requirements of mid to large sized businesses, multi-branch environments as well as Internet Service Providers (ISPs).

MetroNet is available nationally.
